

## Anti-CD7, mouse monoclonal (BS8)

BSH-2004-100 (0.1 ml), BSH-2004-1 (1 ml)

<b>Clonality:</b>	Mouse monoclonal antibody
<b>Clone:</b>	BS8
<b>Application:</b>	IHC-P (1:100– 1:400), IHC-Fro
<b>Species Reactivity:</b>	Human
<b>Control tissues:</b>	Tonsil, appendix
<b>Buffer:</b>	TRIS with 0.03% sodium azide, pH 7.2
<b>Storage:</b>	Store at 4°C

### Description

CD7 transmembrane protein is a member of the immunoglobulin superfamily. This protein is found on thymocytes, mature T cells and NK-cells. It plays an essential role in T-cell interactions and also in T-cell/B-cell interaction during early lymphoid development.

### Protocol

1. Deparaffinize and rehydrate tissue section
2. Wash: aqua dest, 2×5 min
3. Pre-treatment: PT-module HIER pH 9.0 (20min at 98°C)
4. H<sub>2</sub>O<sub>2</sub> (concentration 3%), 10 min
5. Wash: PBS or TBS buffer, 2×5 min
6. Primary antibody diluted as recommended, 30 min
7. Wash: PBS or TBS buffer, 2×5 min
8. One step HRP-polymer detection, 30 min
9. Wash: PBS or TBS buffer, 2×5 min
10. DAB Substrate, 8 min
11. Wash: aqua dest, 2×2 min
12. Counterstain, dehydrate and coverslip

Dilution of concentrated antibody depends on the pre-treatment method and detection system used. Above protocol used in Optibodies evaluation and is meant as a reference. Final working dilution and protocol applied needs to be determined by the user always.

Appendix section has been stained using CD7 optibody (Clone: BS8) with 1:250 dilution. CD7 positive T-cells have strong membranous label.

Tonsil section has been stained using CD7 optibody (Clone: BS8) with 1:250 dilution. CD7 positive T-cells have strong membranous label.

Tonsil section has been stained using CD7 optibody (Clone: BS8) with 1:250 dilution. CD7 positive T-cells have strong membranous label.
